

# In-demand occupations of the future

Analysts believe that will soon change the principle of education, many current professions will go with the working of the market and will give way to the future of modern technologies, and with them will come into use for a new profession. The leading position will be to retain software engineers, web-designers, programmers, consultants. In the school environment in high esteem will be the teachers of computer science and information security, everything to do with the flow of Internet information and systems computer hardware.

Why is such a necessary profession in life, as a lawyer, doctor, economist, journalist will go into the background? Depart by far, but some professions will be able to enter in a new trend, slightly undergone changes under the parameters of the new time.

Lawyers will retain their relevance in the new era, so as to obtain the patent, to enter into contracts for the supply of information services and development and the struggle over copyright will only intensify.

Economics are required for production calculate the cost of parts, forecasting of costs, budget planning for the sale of goods and.

To maintain their activity in conditions of computer innovation and journalists, generating articles about artificial intelligence, about scientific invention and keeping up to date with readers about the development of the market of computer technologies.

The medical profession will not disappear from medical use, but possible changes in its functional features close to health services a new virtual staff.

Added a new education in the field of virtual and computer production, the list of professions narrow focus will expand. The projected expansion of the professions will lead to new positions under the name of the designer of the virtual environment. Learning this craft has begun and is gaining popularity. Thanks to this innovation it is possible to create unique objects of the territory, to make a tour in virtual time, the displacement in the time space, the creation of images of mammals, animals, plant world that previously existed.

Data analyst of Internet space, study the supply and demand of the notes, the strategy of spending time in the Internet zone.

In the near future will demand education to restore the environment. These professionals will be busy artificial restoration of flora and fauna, as according to preliminary estimates, at a certain time of resources may not be enough, in connection with what have to explore new territory.

The question of the existence and development of the future has no shades of ambiguity, this strategy formed a fairly clear and consistent. It remains to understand only one that prefer virtual, synthetic or [affordable resume services](#) real world?
